These mast combinations meet the EN 14439 and ASME B30.3-2016 specifications for “out of service” wind conditions, provided the illustrated wind speed matches required design wind speed for the location of the tower crane. The “out of service” design wind speed was determined in accordance with ASCE 7-10, Figure 26.5-1A. The wind velocity, used for this configuration was 98 mph (158 kph), which represents a nominal design 3-second wind gust at 33 ft (10 m) above ground for Exposure B category. A factor of 0.85 was applied to the 700-year ultimate design wind speed of 115 mph (185 kph), per ASCE 37-02, with the assumption that this crane is considered a temporary structure used during a construction period of 2 years or less.

-  Jib elevation
-  Standard equipment
-  Options
-  Potain Plus function: Plus load curves
-  Hook heights with Plus load curves
-  Reactions in service
-  Reactions out of service
-  Total ballast weight
-  Jib weight
-  Lorry 44 ft
-  Container High Cube 40 ft, and/or Flat Rack 20 ft
-  Hoisting
-  Trolleying
-  Slewing
-  Travelling
-  Required power
-  Power Control Function: winch speeds adapted to the available power
